

SUPRACIDE BU-30

Leather Auxiliary

Technical Information

Properties :

A very powerful, universal preservative, fungicide and bactericide for the leather based on TCMTB which prevents damage and losses as a result of bacteria and mould, it is five to ten times as effective as the normal phenolic based proprietary preservatives.

The product is free from chlorinated phenolic compounds and is biodegradable.

- Appearance** : Amber coloured transparent liquid with a faint odour.
- Character** : Non-ionic
- Active Content** : 30% ± 2%
- Solubility** : Freely miscible in water to form a stable emulsion, its 10% emulsion is stable over a week's period.
- Toxicity** : Toxicity of its 10% emulsion is much lower than normal phenolic preservatives but human contact should be avoided as it irritates the skin. Use of rubber gloves is essential while handling the virgin or its 10% emulsion.
- Caution** : Follow the instruction under title toxicity above very carefully. Human skin which has come into contact with the skin must be washed with plenty of water and soap to eliminate the trace of this material on the skin. Oral contact should be totally avoided.

Recommendations are based on current knowledge and experience but without engagement and warranty.
